

USER MANUAL

LIVE PLATFORM EDITION

Prepared for Little Feet schools, staff teams and families
September 2026

[START HERE](#)

Sign in and find your way

Use the Little Feet email or staff ID and password supplied by your school. Keep “save login details” on only for a protected personal device. Select Secure Account Login. After a successful sign-in, the portal plays one short five-second Little Feet jingle; device volume and browser sound settings control whether you hear it. If your school later enables Google, Microsoft or Yahoo sign-in, follow the provider button and use the account that matches your Little Feet record.

The current sign-in screen. Provider buttons become real sign-in choices only after your school has completed its secure provider setup.

HOME AND NAVIGATION

Your role decides what you see

Use Home to return to your role-specific starting page. A single compact welcome banner identifies the relevant workspace without repeating generic welcome copy. The top status displays School day in progress only during configured campus hours on a weekday within the official South African public-school term; it displays School closed for weekends, holidays, term breaks and after hours. On desktop, navigation is grouped under Academics, Finance, Operations and Safety. On a phone, use Menu. Use Search or press / to find an available workspace.

Example administrator dashboard. Other roles see a simpler home view and only their authorised tools.

PARENTS

Stay connected to your child

Parents can view only children linked to their account, up to four children. Use School Feed for approved updates, Timetable for class routines, Reports & Reviews for shared progress, Safety Alerts for urgent notices, School Store for the school link and Tickets when help is needed.

Linked children If a child is missing, ask an administrator to add the approved parent-child link.	Reports Read the shared report carefully and complete parent review or signature where requested.
Privacy Do not share screenshots, passwords or another family's information.	Support Use Tickets and include the screen, action and time - never include a password or medical record.

EDUCATORS

Record the school day clearly

Use Daily Attendance and Daily Register for arrivals and departures. Record meals, naps, mood, toileting and care information factually. Use Schedules and Learning Files for planned activities and evidence. Before sharing a report, check that the learner, period and intended family are correct.

Templates Download the relevant CSV or Excel template, fill it in, preview the data and import it.	Care records Record only information needed for care and follow school medicine and incident processes.
Communication Use Team Chat for staff coordination and Tickets for support or meeting requests.	Shared devices Sign out whenever a device is shared or moved between classrooms.

LEADERSHIP AND ADMINS

Set up safe access

Administrators create accounts, verify staff registrations, import approved school data and link parent accounts to learner names. Production records are stored separately in PostgreSQL, reducing database rewrites and allowing indexed school-level access. Principals oversee operational records, care, attendance, finance and school workflows according to their role.

Area	What is included now	Who benefits
Import School Data	Preview an approved spreadsheet, resolve duplicates and import learner information.	Admin / Principal
Account Management	Create accounts, choose roles and connect a parent to up to four learners.	Admin
Safeguarding	Record consent and review care, pickup and privacy-aware actions.	Staff / Leadership
Debug report	Administrators can collect a support-ready error reference without exposing child data.	Admin

Finance reconciliation: Administrators can match a bank statement entry to the exact Little Feet reference and amount. Every accepted update is written once to the school payment ledger; repeating the same event ID does not duplicate it. Gateway webhooks remain disabled until a signing secret is configured.

MOBILE, TABLET AND SHARED DISPLAY

Choose the safest screen for the job

Phones are best for quick checks, updates and tickets. Tablets suit classroom attendance and daily care logging. Shared displays and TVs should show only non-sensitive dashboards, notices and approved schedules - never learner records, contact information or medical details.

Phone Use Menu; buttons are full-width and content stacks into one readable column.	Tablet Use templates and check records before saving. Lock the device between learners.
Desktop Use the grouped sidebar, Search, keyboard shortcuts and filters where available.	Shared screen Show information intended for everyone, not private child or family information.

HELP AND TROUBLESHOOTING

Get help without risking information

If something does not look right, refresh once and check the server status indicator. Then open Tickets. Explain the tab you were using, the action you took and the time it happened. Do not include PINs, passwords, identity numbers, medical notes or full learner records in a ticket.

A tab is missing Your school role or subscription may not include it. Ask an administrator to check your account.	A child is missing For parents, an administrator must confirm and add the parent-child link.
A map is slow Location and public data may take time. Try again on a stable connection.	No login sound Use the login button after interacting with the page, then check the phone or browser media volume. Mobile browsers may block sound until the first tap.
A provider button stops Google, Microsoft and Yahoo sign-in need a school-approved provider connection first.	

Keyboard shortcuts: H = Home; T = Tickets; F = School Feed; S = Timetable; G = Help & Guide; / = Search. Shortcuts do not run while you are typing in a form.
