

PLATFORM PRESENTATION

LIVE PLATFORM EDITION

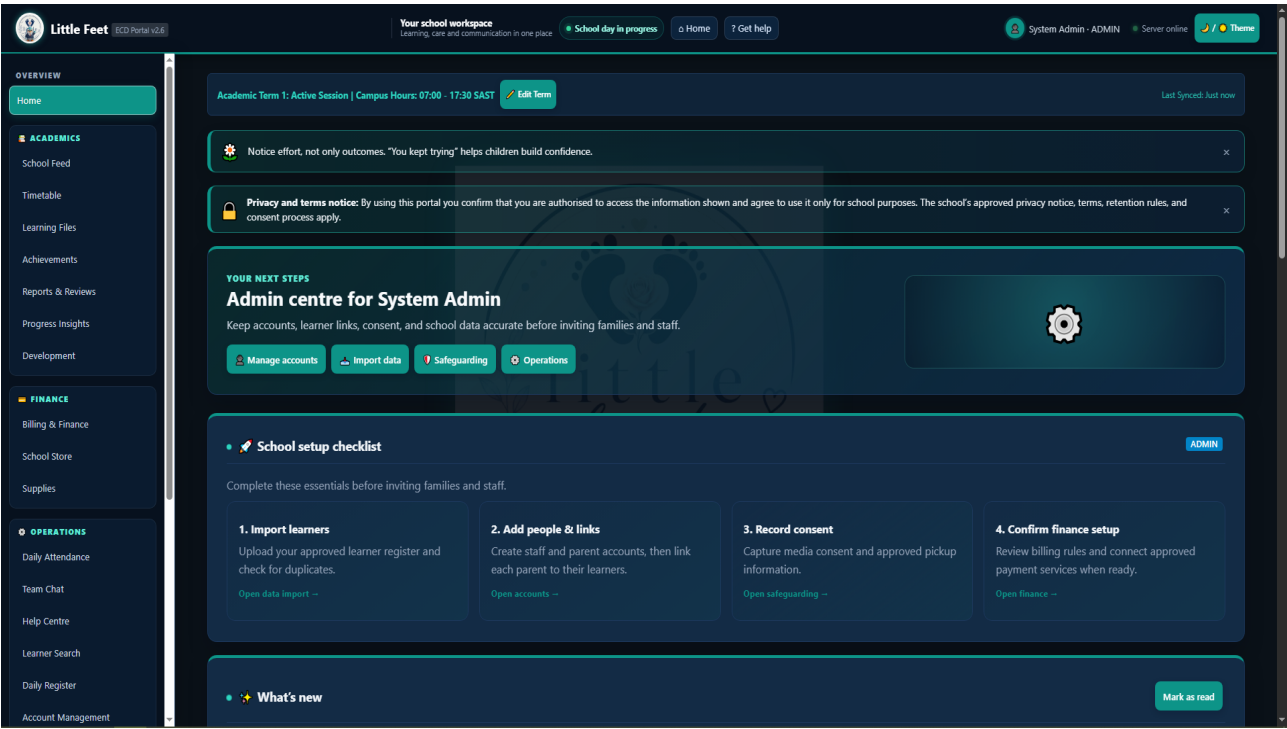

Prepared for Little Feet schools, staff teams and families
September 2026

THE PLATFORM

One connected school experience

Little Feet brings the everyday work of early-learning centres and schools into role-aware workspaces. The live portal is designed to make common actions clear: find the right tool, complete the record, and keep the correct people informed.

Responsive by design A single interface adapts to desktop, tablet, phone and shared-screen use.	Role-aware access Parents, educators, principals, district teams and administrators see one concise welcome banner with only their relevant workspace guidance.
Operational guidance Home pages show a live school-open status using Johannesburg time, official term dates and campus hours.	Live readiness A protected readiness check confirms PostgreSQL, encryption, secure cookies and durable database-backed login sessions.

Updated live dashboard: grouped navigation, quick access, school setup checklist and role-specific actions.

WHAT IS NEW

A clearer, more capable working day

The interface now uses a grouped sidebar instead of an overloaded horizontal tab bar. It supports search, keyboard shortcuts, collapsible groups, preferences, a mobile menu and compact quick access for staff roles.

Area	What is included now	Who benefits
Academics	Schedules, learning files, achievements, reports, progress insights and development records.	Families and educators
Finance	School staff see institutional pricing, onboarding and billing. Parents see only their optional family plan.	Role-specific
Operations	Attendance, team chat, tickets, registry, accounts, imports and classroom operations.	Staff and admins
Safety	Alerts, care records, safeguarding, consent and authorised-pickup workflows.	All approved roles

DATA AND SAFETY

Built for accountable school records

Learner imports include duplicate checks and large registers are sent in secure batches so schools can integrate without one oversized request. Sensitive medical, emergency and pickup fields are encrypted in the application. Production PostgreSQL stores operational information and login sessions in durable database records, so changing one attendance or learner record does not rewrite the complete school database and a server restart does not automatically sign everyone out. Existing legacy state is migrated automatically. Parent views are limited to linked learners, with a maximum of four child links per parent account. On the free pilot, individual media uploads are limited to 5 MB to protect database capacity and response times.

IMPLEMENTATION

From migration to confident adoption

A focused rollout avoids overwhelming staff: configure the school, import approved records, create role-based accounts, link parents to children, capture consent and train each team on the few workflows they use most.

Week 1 - Migration Review the source register, import approved learner records and confirm class, parent and staff data.	Two-week trial Use Little Feet with real daily routines, reports and communication before the agreement begins.
Launch support Confirm onboarding, privacy notices, subscriptions and staff workflows with school leadership.	Commercial terms The signed school quotation defines the plan, 30-day money-back period, 36-month agreement and any agreed fees.

INTEGRATIONS

Connect only when ready

Google, Microsoft and Yahoo sign-in, gateway payments, SMS and accounting connections require each school's approved provider account and credentials. Free bank-transfer billing can be reconciled by an administrator using unique event IDs, amount matching and a school-scoped payment ledger. A signed, idempotent webhook foundation is available for a future gateway. The portal does not pretend that an external provider is active before it is securely configured.

NEXT STEPS

A practical live roadmap

1. Confirm the school data owner and privacy contacts. 2. Review the administrator-only system doctor and missing-action list. 3. Configure sign-in providers and payment tools only after approval. 4. Use the setup checklist to onboard each school. 5. Review access, payment events, error reports, backups and support tickets regularly. Capacity smoke testing covers 1,500 school tenants, two 1,000-learner pilot schools and 500 sustained requests at up to 90 concurrent connections. Free hosting remains a pilot environment without a service-level guarantee.

For families	For educators	For leadership
Clear, linked-child views for learning, schedules, alerts, reports, consent and support.	Fast daily logging, attendance, communication, templates and classroom operations.	Role configuration, imports, records, subscriptions, safeguarding and oversight.
